

# Computing: Coding

## Key vocabulary

<b>Goal</b>	An aim or purpose.
<b>Logical</b>	To think carefully about something.
<b>Program</b>	A series of instructions that can be put into a computer to make it do something.
<b>Debug</b>	To remove bugs (mistakes) from a computer program.
<b>Loop</b>	A series of instructions that is repeated until a particular thing happens.
<b>Event</b>	An action that causes something to happen.

## Key question:

How can I design, write and debug programs to accomplish specific goals?

We are using Code.org to learn about computer programming.

We are using logical reasoning to explain how simple algorithms work and debug issues.

We are designing our own programs to accomplish specific goals, using sequencing and loops to make our programs more efficient.
