

Parts of a Flower/Plant

Flower
Attract the insects to come along

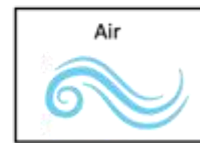

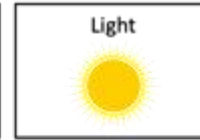

Leaf
Catches the sunlight to make food

Stem
Hold the flower/plant upright and carry water up the plant

Roots
Collect the water from the soil and hold the plant in the ground

Y2 - Plants

What Plants need

To grow into a healthy adult flower or tree, plants need water, light, nutrients and air. Without these the plant might wilt and die.

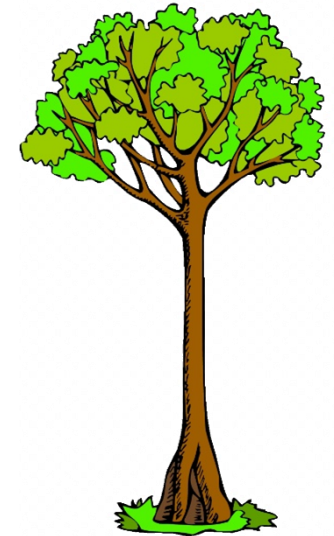

Parts of a Tree

Leaves
Catches the sunlight to make food

Fruit
Attracts insects/birds to come and eat the fruit to take the seeds away

Trunk
Hold the tree up strong and take water up to the leaves. Also the bark protects the trunk.

Roots
Collect the water from the soil and hold the plant in the ground

Healthy and Unhealthy

We need to grow healthy plants and flowers. A healthy plant needs water, sunlight, soil and air.

Watch your plant grow healthy by looking after it properly!

Germination

When it is the right conditions, a seed will start to germinate. This means the seed or bulb starts shooting out and begins the process of growing.
