Spring 2

Vocabulary	Definition
Goal	An aim or purpose.
Logical	To think carefully about something.
De-bug	Finding and fixing problems in an algorithm or program.
Repetition	To do something again.
Predict	To make a prediction and estimate.
Program	An algorithm that has been coded into something that can be run by a machine.
Algorithm	A list of steps to finish a task.
Sequence	Putting commands in the correct order so computers can read the commands.
Instructions	Directions and orders for how something is done.

# Code.Org

Key Question: How can I design, write and debug programs to accomplish specific goals?

Lesson 1 – How can I keep my information private and secure?

I need a good password that includes 8 characters, numbers and symbols and it is impossible to guess.

I can tell an adult or block someone if I feel unsafe.

Lesson 2 – How can an algorithm be debugged?

An algorithm can have problems that need to be fixed.

Debugging is when you fix your error in the algorithm.

Lesson 3 – How can an algorithm be sequenced correctly?

Commands are what the computer reads and follows the movements.

Errors can be fixed by debugging.

Lesson 4 – How can I fix existing errors in code?

Errors can occur in code. They need to be fixed by running the algorithm and debugging it.

Debugging takes more than 2 attempts.

Lesson 5 – Can I make an algorithm?

A computer can only follow written instructions.

An algorithm has to be in the right order.

Lesson 6 – Why are loops useful when programming?

Loops avoid repetition of the same instruction.

An algorithm can be simplified with loops.

Actions can be repeated.

Substantive concepts	Vocabulary		
Microsoft Word	<b>Keyboard</b> - Something that you type on to get different letters, numbers and symbols.		<b>Word processing</b> - Word processing involves the use of computers, software, and printers to get data into printed form.
E-Safety	<b>E-safety</b> - Knowing ways to safe online.	<b>Cyber bullying</b> - Bullying that takes place through electronic devices online.	<b>Social media</b> - Websites and applications that allow users to create and share content.
Art & Design	<b>Animation</b> - A way of making a movie from many still images.	<b>Frames</b> - Individual pictures in a sequence of images.	
Computer Science	<b>Algorithm</b> - A process or set of rules to be followed.	<b>Debug</b> - To find and fix any mistakes or errors.	<b>Program</b> - A precise series of instructions written in a computer language.
Presentation	<b>Image</b> - A picture of something.	<b>Resize</b> - To make the file size or image smaller.	<b>Layout</b> - How the images and texts looks like on the page.
PowerPoint	<b>Screenshot</b> - To take a picture of your screen or part of your screen.		<b>Shortcuts</b> - Using the keys efficiently on the keyboard to perform tasks. <div style="display: flex; flex-wrap: wrap; justify-content: space-around; margin-top: 10px;"> <div style="text-align: center;"> Undo &lt;ctrl&gt; + z</div> <div style="text-align: center;"> Cut &lt;ctrl&gt; + x</div> <div style="text-align: center;"> Copy &lt;ctrl&gt; + c</div> <div style="text-align: center;"> Paste &lt;ctrl&gt; + v</div> <div style="text-align: center;"> Select All &lt;ctrl&gt; + a</div> <div style="text-align: center;"> Save &lt;ctrl&gt; + s</div> <div style="text-align: center;"> Redo &lt;ctrl&gt; + y</div> <div style="text-align: center;"><b>B</b> Bold &lt;ctrl&gt; + b</div> <div style="text-align: center;"><i>I</i> Italics &lt;ctrl&gt; + i</div> <div style="text-align: center;"><u>U</u> Underline &lt;ctrl&gt; + u</div> </div>
