Key Question: How can I make an algorithm and get rid of errors?

Vocabulary	Definition
A quarter turn	To turn 90°.
Instructions	Directions and orders for how something is done.
Algorithm	A list of steps to finish a task.
De-bug	Finding and fixing problems in an algorithm or program.
Error	Something that went wrong.
Right	To move right.
Left	To move left.

An example of an algorithm.

Substantive concepts	Vocabulary		
Microsoft Word	Keyboard - Something that you type on to get different letters, numbers and symbols.  Word processing - Word processing involves the use of computers, software, and printers to get data into printed form.		
E-Safety	E-safety - Knowing ways to safe online.	Cyber bullying - Bullying that takes place through electronic devices online.	Social media - Websites and applications that allow users to create and share content.
Art & Design	Animation - A way of making a movie from many still images. Frames - Individual pictures in a sequence of images.		
Computer Science	Algorithm - A process or set of rules to be followed.	Debug - To find and fix any mistakes or errors.	Program - A precise series of instructions written in a computer language.
Presentation	Image - A picture of something.	Resize - To make the file size or image smaller.	Layout - How the images and texts looks like on the page.
PowerPoint	Screenshot - To take a picture of your screen or part of your screen.	Shortcuts - Using the keys efficiently on the keyboard to perform tasks. <div>  Undo <ctrl> + z  Cut <ctrl> + x  Copy <ctrl> + c  Paste <ctrl> + v  Select All <ctrl> + a </div> <div>  Save <ctrl> + s  Redo <ctrl> + y  Bold <ctrl> + b  Italics <ctrl> + i  Underline <ctrl> + u </div>	

Lesson 1 – What personal information should not be shared?

I should never share:

my name
my address
a photo of me or my family

Lesson 2 – Can I drag and drop items efficiently?

Use the mouse and click the left hand button.
Drag the mouse and move the cursor from A to B.

Lesson 3 – Can I make a simple algorithm and fix any errors?

A computer can only follow clear instructions.
An algorithm can move something up, down, left and right.

Lesson 4 – How can computers read my instructions?

If instructions have errors, the algorithm will not work.
You can fix errors by debugging.

Lesson 5 – How can algorithms be sequenced and debugged?

Errors can be fixed by debugging.
It can take more than 1 time to fix the algorithm.

Lesson 6 – Can algorithms be simplified and be repeated?

A loop can shorten the code.
A computer can read an algorithm.
A computer can repeat your instructions.
